

iOS LLVM Pass代码Review（二）

一、环境配置

目前本人使用环境：

🌟 macos 12.6
xcode 14.0.1
clang&&llvm 13.0.1

那就找xcode 对应版本的llvm，本人安装的是llvm 13.0.1_2

```
1 sudo brew install llvm@13
```

二、编译

1、拷贝llvm 导师项目

```
1 git clone https://github.com/banach-space/llvm-tutor
```

2、配置llvm和项目路径

```
1 export LLVM_DIR=/opt/homebrew/Cellar/llvm@13/13.0.1_2  
2 export LLVM_TUTOR_DIR=/Users/xiakejie/ME/break/llvm-tutor
```

3、编译dylib

```
1 mkdir build  
2 cd $build  
3 cmake -DLT_LLVM_INSTALL_DIR=$LLVM_DIR ../  
4 make
```

4、练练手

拿libHelloWorld.dylib

.c 转.bc 文件上一篇文章有讲到

```
1 $LLVM_DIR/bin/clang -O1 -S -emit-llvm $LLVM_TUTOR_DIR/inputs/input_for_hello.c
2
3 $LLVM_DIR/bin/opt -load libHelloWorld.dylib -helloworld ./hello.bc -o /dev/null
4
5 $LLVM_DIR/bin/opt -load ./libHelloWorld.dylib -help | grep hello
6
```

```
+ build_hello git:(main) x $LLVM_DIR/bin/opt -load libHelloWorld.dylib -helloworld ./hello.bc -o /dev/null -time-passes -enable-new-pm=0
(llvm-tutor) Hello from: main
(llvm-tutor)   number of arguments: 2
(llvm-tutor) Hello from: luck
(llvm-tutor)   number of arguments: 2
=====
... Pass execution timing report ...
=====
Total Execution Time: 0.0004 seconds (0.0012 wall clock)

---User Time---  --System Time--  --User+System--  ---Wall Time---  ---Instr---  --- Name ---
0.0001 ( 87.2%)  0.0003 ( 95.9%)  0.0004 ( 93.3%)  0.0011 ( 97.6%)  1839466 Bitcode Writer
0.0000 (  2.6%)  0.0000 (  3.7%)  0.0000 (  3.4%)  0.0000 (  1.2%)  145241 Hello World Pass
0.0000 ( 10.3%)  0.0000 (  0.4%)  0.0000 (  3.4%)  0.0000 (  1.2%)  156308 Module Verifier
0.0001 (100.0%)  0.0003 (100.0%)  0.0004 (100.0%)  0.0012 (100.0%)  2141015 Total
=====
LLVM IR Parsing
=====
Total Execution Time: 0.0010 seconds (0.0073 wall clock)

---User Time---  --System Time--  --User+System--  ---Wall Time---  ---Instr---  --- Name ---
0.0002 (100.0%)  0.0009 (100.0%)  0.0010 (100.0%)  0.0073 (100.0%)  4559388 Parse IR
0.0002 (100.0%)  0.0009 (100.0%)  0.0010 (100.0%)  0.0073 (100.0%)  4559388 Total
```

5、编写代码规范检查的pass

1、检查类名(Interface), 不能带有下列线

2、检查变量(Interface), 不能带有下列线

```
1 #include <iostream>
2 #include "clang/AST/AST.h"
3 #include "clang/AST/ASTConsumer.h"
4 #include "clang/ASTMatchers/ASTMatchers.h"
5 #include "clang/ASTMatchers/ASTMatchFinder.h"
6 #include "clang/Frontend/CompilerInstance.h"
7 #include "clang/Frontend/FrontendPluginRegistry.h"
8
9 using namespace clang;
10 using namespace std;
11 using namespace llvm;
12 using namespace clang::ast_matchers;
```

```

13
14 namespace CodeReview {
15     class TestHandler : public MatchFinder::MatchCallback{
16     private:
17         CompilerInstance &ci;
18
19     public:
20         TestHandler(CompilerInstance &ci) :ci(ci) {}
21
22         //判断是否是用户源文件
23         bool isUserSourceCode(const string filename) {
24             //文件名不为空
25             if (filename.empty()) return false;
26             //非xcode中的源码都认为是用户的
27             if (filename.find("/Applications/Xcode.app/") == 0) return false;
28             if (filename.find("/Applications/Xcode13.4.app/") == 0) return false;
29             return true;
30         }
31
32         // 代码检查的回调方法
33         void run(const MatchFinder::MatchResult &Result) {
34
35             // 检查类名(Interface), 不能带有下列线
36             if (const ObjCInterfaceDecl *decl = Result.Nodes.getNodeAs<ObjCInter
37                 string filename = ci.getSourceManager().getFilename(decl->getSou
38                 if ( !isUserSourceCode(filename) ) return;
39                 size_t pos = decl->getName().find('_');
40                 if (pos != StringRef::npos) {
41                     DiagnosticsEngine &D = ci.getDiagnostics();
42                     // 获取位置
43                     SourceLocation loc = decl->getLocation().getLocWithOffset(po
44                     D.Report(loc, D.getCustomDiagID(DiagnosticsEngine::Warning,
45                 }
46             }
47             // 检查变量(Interface), 不能带有下列线
48             if (const VarDecl *decl = Result.Nodes.getNodeAs<VarDecl>("VarDecl")
49                 string filename = ci.getSourceManager().getFilename(decl->getSou
50                 if ( !isUserSourceCode(filename) ) return;
51                 size_t pos = decl->getName().find('_');
52                 if (pos != StringRef::npos && pos != 0) {
53                     DiagnosticsEngine &D = ci.getDiagnostics();
54                     SourceLocation loc = decl->getLocation().getLocWithOffset(po
55                     D.Report(loc, D.getCustomDiagID(DiagnosticsEngine::Warning,
56                 }
57             }
58         }
59     };

```

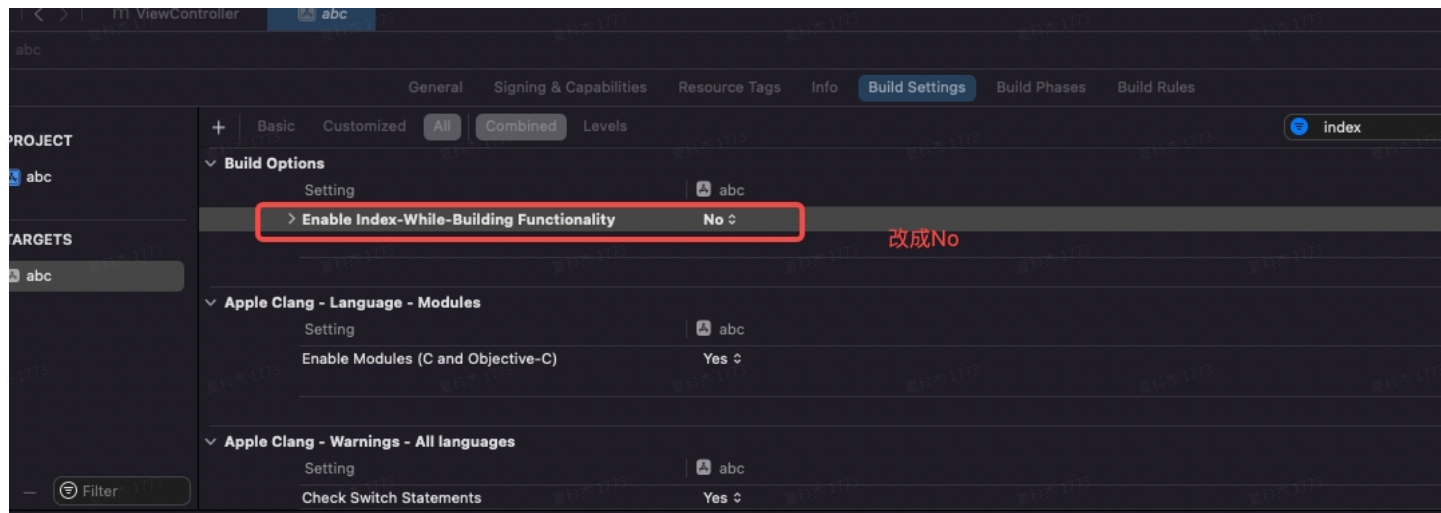

```

60
61
62 // 定义语法树的接受事件
63 class TestASTConsumer: public ASTConsumer{
64 private:
65     MatchFinder matcher;
66     TestHandler handler;
67
68 public:
69     TestASTConsumer(CompilerInstance &ci) :handler(ci) {
70         matcher.addMatcher(objcInterfaceDecl().bind("ObjCInterfaceDecl"), &h
71         matcher.addMatcher(varDecl().bind("VarDecl"), &handler);
72         matcher.addMatcher(objcMethodDecl().bind("ObjCMethodDecl"), &handler
73     }
74     void HandleTranslationUnit(ASTContext &Ctx) {
75         printf("CodeReview1: All ASTs has parsed.");
76         DiagnosticsEngine &D = Ctx.getDiagnostics();
77         // 在编译log中可以看到
78         //D.Report(D.getCustomDiagID(DiagnosticsEngine::Warning, "CodeReview
79         // D.Report(D.getCustomDiagID(DiagnosticsEngine::Error, "CodeReview错
80         matcher.matchAST(Ctx);
81     }
82 };
83
84
85 // 定义触发插件的动作
86 class TestAction : public PluginASTAction{
87 public:
88     unique_ptr<ASTConsumer> CreateASTConsumer(CompilerInstance &CI,
89                                             StringRef InFile){
90         return unique_ptr<TestASTConsumer> (new TestASTConsumer(CI));
91     }
92
93
94     bool ParseArgs(const CompilerInstance &CI,
95                  const std::vector<std::string> &arg){
96         return true;
97     }
98 };
99 }
100
101
102 // 告知clang,注册一个新的plugin
103 static FrontendPluginRegistry::Add<CodeReview::TestAction>
104 X("CodeReview", "Test a new Plugin");
105 // X 变量名, 可随便写, 也可以写自己有意思的名称
106 // CodeReview 插件名称, 很重要, 这个是对外的名称

```

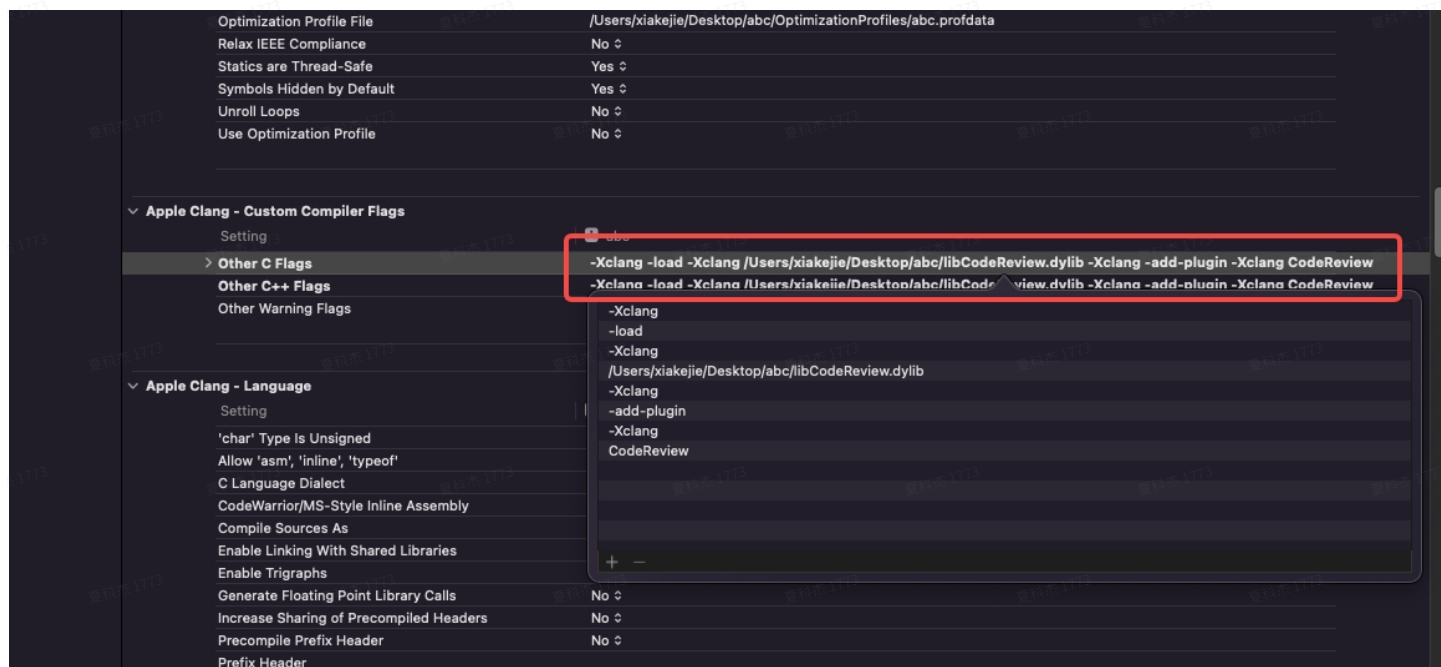

5、xcode 配置

5.1、配置Build Options

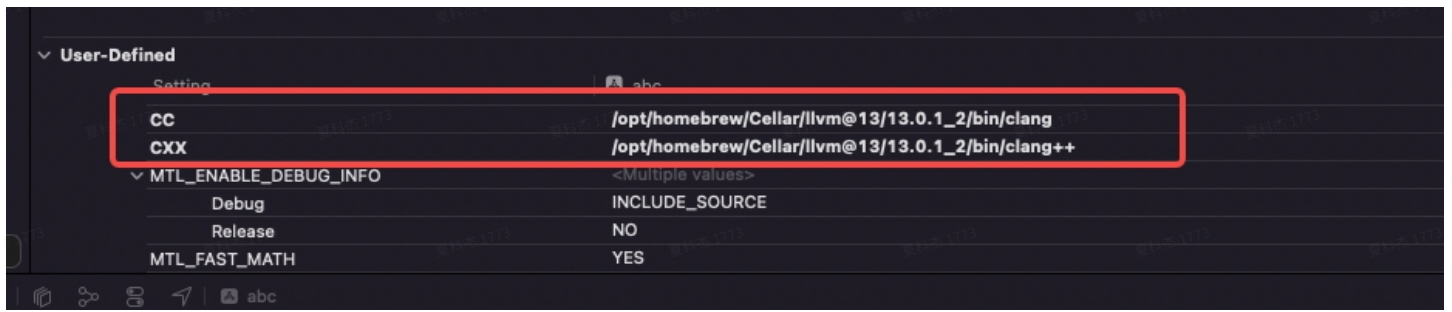

5.2、配置Other C Flags & Other C++ Flags

```
1 -Xclang -load -Xclang /Users/xiakejie/Desktop/abc/libCodeReview.dylib -Xclang -a
```

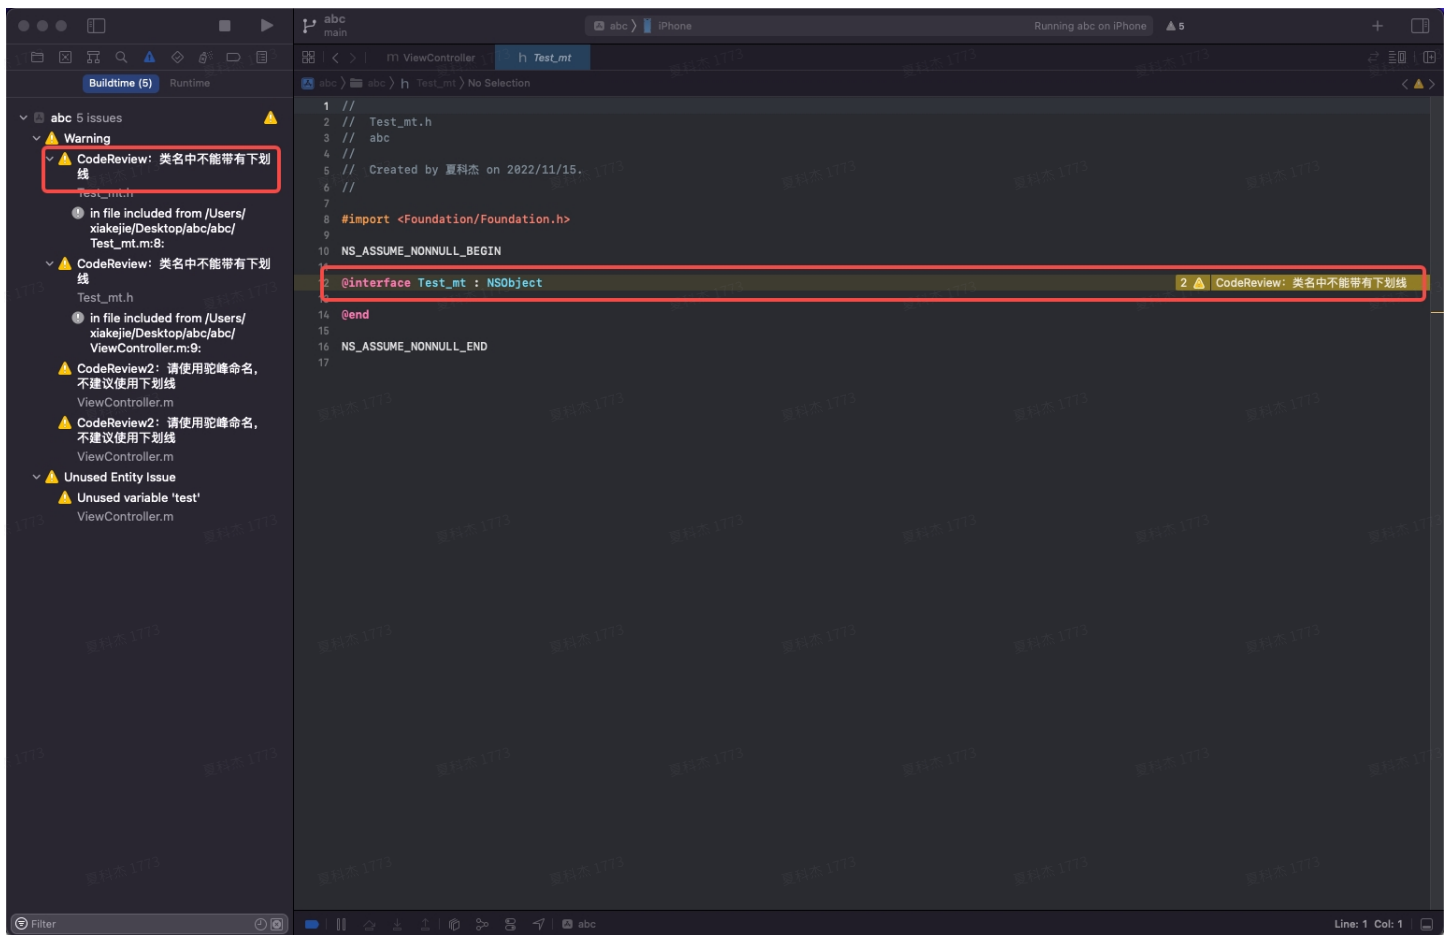

5.3、User-Defined 配置cc 和c++ 路径

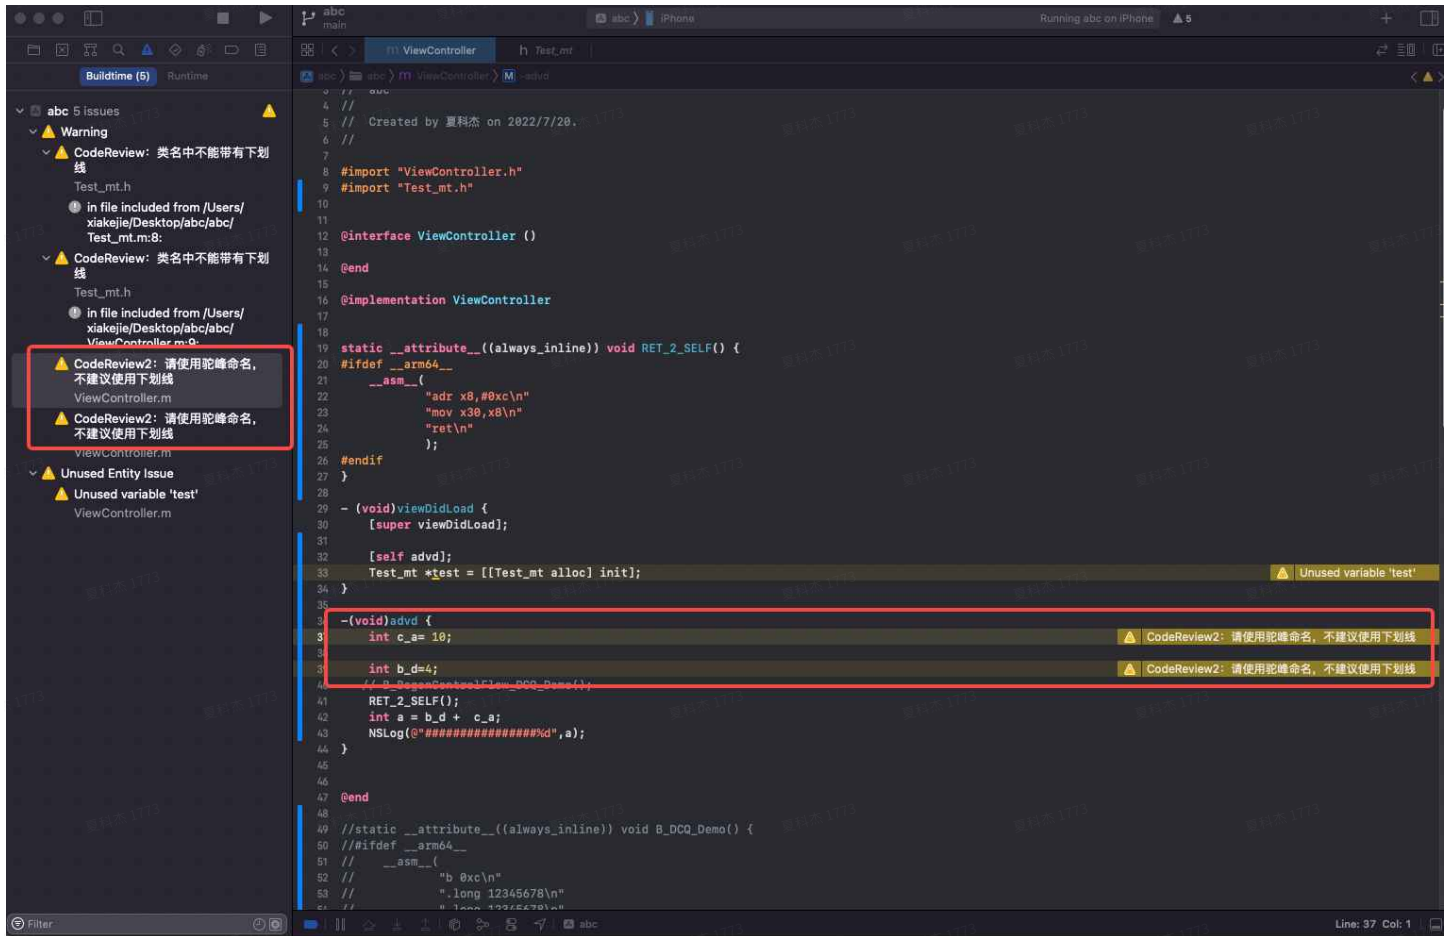

三、效果

1、检查类名(Interface), 不能带有下列线

2、检查变量(Interface), 不能带有下列线

四、后续

1、代码检查规范完善后，可以部署到jenkins 上做代码规范检查。

五、下一步

1、写代码混淆pass
